Career Objective

B.Tech graduate with 1+ year of hands-on experience in software development and backend applications using Python, FastAPI, REST APIs, SQL, PostgreSQL, MySQL, and MongoDB. Experienced in developing APIs, database operations, cloud storage integrations, authentication, data validation, workflow automation, and application troubleshooting. Worked on MediaOps, FlowX, and HRMS applications involving microservices, third-party integrations, large-file processing, and cloud services. Seeking opportunities in Software Development, Backend Development, Data Engineering, or Data Analytics.

Education

Bachelor of Technology in Electronics and Communication Engineering Sep 2022 – Mar 2025
Gayatri Vidya Parishad College of Engineering (Autonomous)

- CGPA: 8.6

Diploma in Electronics and Communication Engineering Jun 2019 – May 2022
GPTW-BHEEMILI

- Percentage: 88.24%

Secondary School Certificate (SSC) Jun 2018 – Mar 2019
Sree Vidya School

- CGPA: 10

Professional Experience

Software Developer, LakkshionsIT July 2025 – Present

MediaOps

- Worked across multiple services in a microservice-based media and content management platform.
- Developed and supported backend services and REST APIs using Python, FastAPI, and NestJS.
- Worked with PostgreSQL, MySQL, and MongoDB for database operations, SQL queries, data validation, and troubleshooting.
- Integrated Meta Developer APIs for social account authentication, account linking, permissions, and publishing workflows.
- Worked with fal.ai for AI-based media generation and Shotstack for video rendering workflows.
- Worked with AWS S3 and Cloudinary for media storage, uploads, retrieval, and asset management.
- Used Temporal for asynchronous workflows, retries, and long-running processing tasks.
- Performed API testing and validation using Postman and Swagger and investigated issues using logs, API responses, and database records.

FlowX – Media Intake & Upload Platform

- Built FlowX, a multi-tenant platform where reporters and external contributors upload large video files that are sent into newsroom workflows.
- Built the FastAPI backend with MongoDB using API, service, and repository layers for uploads, portals, forms, teamspaces, notifications, and reports.
- Implemented large-file uploads using AWS S3 multipart uploads and presigned URLs, allowing files to move directly from users to cloud storage.
- Added support for AWS S3, Google Cloud Storage, and Azure Blob Storage with encrypted customer credentials.
- Built GPU video transcoding using FFmpeg and NVIDIA NVENC with Celery workers.
- Implemented event-driven processing using AWS S3 events and SQS to automatically trigger media-processing workflows.

- Built folder-watch automation to detect new files in storage and automatically create upload packages.
- Developed a no-code Portal Builder and dynamic forms with custom fields and guest-upload support.
- Implemented JWT authentication, RBAC, API keys, user invitations, workspace branding, and audit logs.
- Added rate limiting, security headers, request tracing, and structured logging.
- Developed the React + Vite + Tailwind web application for upload monitoring, reporter console, portal builder, and administration pages.
- Containerized services using Docker and deployed them to Kubernetes through GitLab CI/CD and AWS ECR.

HRMS

- Worked on employee onboarding, attendance, leave management, and employee profile management.
- Developed and supported REST APIs and CRUD operations using Python, FastAPI, SQL, PostgreSQL, and MySQL.
- Performed API-to-database validation to ensure consistency between requests, responses, and stored records.
- Implemented JWT authentication and Role-Based Access Control for Admin, HR, Manager, and Employee roles.
- Used Postman and Swagger for API testing, debugging, and API documentation.
- Performed data validation, debugging, functional testing, and investigation of application and database-related issues.

Projects

Smart Garbage Monitoring System

- Developed a smart garbage monitoring system using Arduino and sensors to monitor garbage-bin fill levels.
- Implemented monitoring logic to identify bin status and support timely notifications.
- Performed sensor data collection, testing, and validation under different conditions.
- **Technologies:** Arduino Uno, Sensors, Python

Flood Monitoring System

- Developed a flood monitoring system using Arduino Uno and sensors to monitor water levels in dams or rivers.
- Implemented different LED indications based on detected water levels.
- Performed testing and validation of sensor readings under different conditions.
- **Technologies:** Arduino Uno, Sensors

Technologies

Programming Languages: Python, SQL, HTML, CSS

Backend Technologies: FastAPI, NestJS, REST APIs

Database Technologies: PostgreSQL, MySQL, MongoDB

Data Engineering: Data Validation, Data Processing, Data Integration, API Data, Database Operations, Large File Processing

Cloud & Storage: AWS S3, Google Cloud Storage

Processing & Messaging: Celery, Redis, FFmpeg, NVIDIA NVENC, Temporal

Frontend Technologies: React

DevOps & Tools: Docker, Kubernetes, GitLab CI/CD, Git, Postman, Swagger

Authentication & Security: JWT, RBAC, API Keys, Rate Limiting

Third-Party Integrations: Meta Developer APIs, Shotstack, fal.ai

Soft Skills

- Problem-solving
- Team collaboration
- Communication
- Adaptability
- Time management
